AMENDMENT TO THE CLAIMS

Claims 1-28 (Cancelled)

29. (Currently Amended) A method of endoscopic imaging  
comprising:

providing an imaging sensor array on a distal end of an  
endoscope, a filter that spectral resolves light that is  
detected by the imaging sensor array into a plurality of  
wavelengths, the filter being positioned at ~~on~~ the distal end  
of the endoscope, the endoscope having a fiber optic cable  
extending from a proximal end of the endoscope to the distal  
end, the proximal end of the fiber optic cable being  
optically coupled to a laser radiation source or a broadband  
light source;

positioning the distal end of the endoscope adjacent to  
tissue to be examined;

irradiating a region of interest on the tissue with  
radiation from the laser radiation source or the broadband  
light source that is delivered through the fiber optic cable;

sensing endogenous fluorescence or Raman scattered light  
returning to the distal end of the endoscope with the  
filtered sensor array in response to the irradiation of the  
regions of interest with the radiation, the returning light

Application No.: 08/745,509

Confirmation No.: 6390

being directed onto the sensor array at the distal end of the endoscope with a lens;

generating an electronic representation of the region of interest with the sensor array; and

storing the representation in a computer electronic memory.

30. (Previously Presented) The method of Claim 29 further comprising: providing a laser radiation source and optically coupling the laser radiation source to the proximal end of the fiber optic cable.
31. (Previously Presented) The method of Claim 29 further comprising providing an acousto-optic filter that is coupled to a focal plane array sensor.
32. (Previously Presented) The method of Claim 29 wherein the positioning step comprises inserting the distal end into a body lumen.
33. (Previously Presented) The method of Claim 29 further comprising forming an image of the region of interest.

Application No.: 08/745,509  
Filed: November 12, 1996  
TC Art Unit: 3737  
Confirmation No.: 6390

34. (Previously Presented) The method of Claim 29 further comprising sensing radiation having wavelength in the range of 1-2 microns.
35. (Cancelled)
36. (Previously Presented) The method of Claim 29 further comprising determining concentrations of plurality of tissue components.
37. (Previously Presented) The method of Claim 29 wherein the step of providing a filter further comprises providing a tunable filter.
38. (Previously Presented) The method of Claim 29 further comprising determining weight percentages of components of the tissue from the stored electronic representation.
